

**ENDANGERED
TOKENS**

Preserve – to – Earn Ecosystem

Regenerative Finance (ReFi)

Grow your value while protecting life

“Store your value in a scarce, georeferenced and protected endangered specimen.”

“A new way of growing your value directly from mother nature’s scarcity”

“Invest in a new way of value transfer leveraged on our biodiversity’s most treasured resources”

¿ What is Endangered Tokens ecosystem ?

-“The place where you can foster biodiversity, save Endangered Species and make an investment from it”

-“Where art, nature preservation, tokenomics and sustainability meets”

Endangered Tokens

Purpose of creation

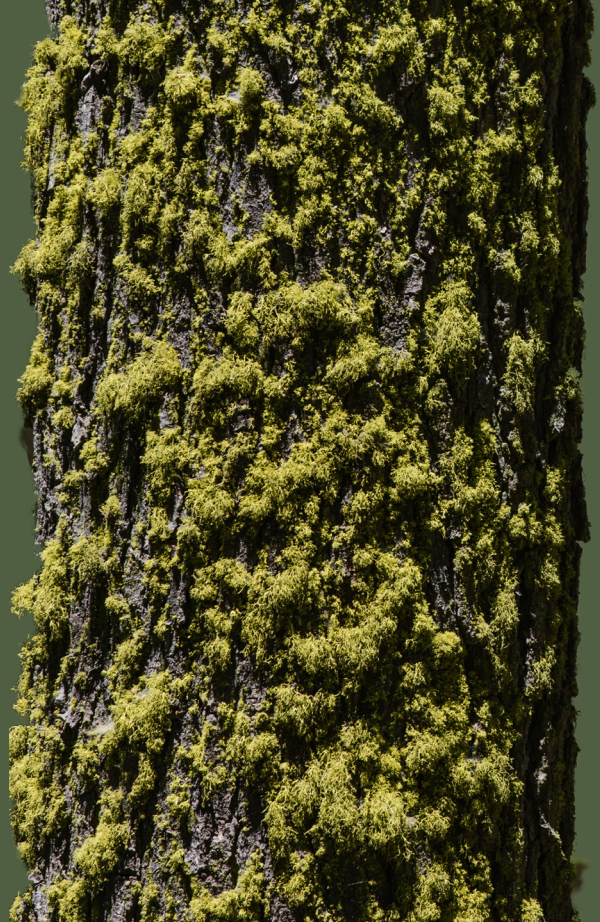

Mission

Form a decentralized investment community for biodiversity preservation, giving Value and governance to stakeholders through Crypto Assets.

Vision

As humans we need to revalue biodiversity and living ecosystems through the preservation of Endangered Species, which are invaluable assets to society. This future is possible with the support of decentralized economies driven by self-sustainable and healthy ecosystems in which the community collaborates to generate the appropriate incentives towards creating a better world.

The identified problem

Endangered species are part of complex ecosystems that are now fragile due to human activity, threatening biodiversity. Their preservation is expensive since there are almost no incentives for landowners and authorities to preserve them and have even become liabilities. On top of that NGOs struggle to finance conservation activities relying mostly on donations.

The Solution

Return the value to biodiversity through tokenization of living specimens of endangered species and generate a global decentralized economic ecosystem of tradable assets and incentives to promote its survival and reproduction through the collaboration and engagement of the community, giving value to stakeholders through the natural scarcity of the species, art, tourism, enviromental education, local sustainable development and carbon credits.

Meet the Tokens: Our NFTs products collections

Grove Art_

Elder ENTs NFT_

This Video Art Token is the main Crypto Asset within ENTs ecosystem. It represents a specific Endangered species specimen. If you own this token, you become the godparent of that single living being, fostering its protection through certified local NGOs and access to the best earning mechanism of our ecosystem.

Some Perks

- Tokens Airdrops
- Improve life condition of real life tree
- \$ROOTS farming (Coming soon)
- DAO Governance (Coming Soon)
- Metaverse assets participation
- Chance to visit in real life

(OpenSea Official Account)

Meet the Tokens: NFTs with purpose (ERC-721)

GROWTHMAP

ENTS Eligibility criteria

We believe that every endangered species conservation should be part of our rights and duty as mother earth co- habitants, but in order to standardize our prioritized species, we believe ENTS species must be unique, threatened and rare, representing a real urgency for biodiversity conservation.

Endangered Species Eligibility Criteria:

Origin

Endemic
Species of an
specific
territory or
Ecosystem

Conservation

Categorized as “Critically
endangered” or “ Endangered”
species on the IUCN Red List
of threatened species, or as a
locally endangered
categorization

Scarcity

Less than 10.000
individuals or possess
a distribution area of
less than 10.000 km²

ENTS Conservation Program

Our conservation program is directed to approach endangered species preservation in an holistic way, fostering the work of local NGO's, promoting local and sustainable development through the protection of biodiversity, community engagement and environmental education.

Our main six action areas are:

- Tokenization, extensive Cadastre & Landowner agreements
- In-situ conservation actions to reduce threats.
- Ex-situ conservation and landscape restoration actions.
- Sustainable local development & Community engagement
- Research on species and their habitats.
- Carbon Bonds verification & holding

First ENT Family_ Queule (Gomortega keule)

- Gomortega Keule is a **critically endangered**, one-of-a-kind, natural treasure and endemic tree species from Southern Chile.
- Quele tree, the **only member** of the Gomortegaceae family has an approximate population of 4000 specimens in a range of less than 6.500 Km²
- We've been working with **Chilean NGO's**, protecting and identifying Queule communities and engaging the community through environmental education.
- First Habitat to Cadastre: **"El HualHual"** forest with an Estimated Population of 200 Queule Specimens.

Preserve – to – earn Ecosystem_ A new era of crypto incentives

We are creating a decentralized incentives ecosystem to foster the investment in preserving endangered species and their habitats rewarding holders, first adopters, active collaborators, local NGO's and landowners.

> The Dapp will be launched in Stage 4 of the Growthmap

Sneak Peak

> Community Currency and Utility Token
ERC-20 \$ROOTS fungible Token launch
(Airdrops Coming!). Necessary to
implement the right incentives
towards preserve-to-earn dynamics.

Use Cases

- To buy NFTs through our platform as first buyer at a discount.
- To Stake it and earn
- To pay for planting verified new trees
- To buy expedition tickets to meet the real life ENTs
- In Dapp merch purchases

Fundraising

First 5 Elder ENTS NFT
set to OpenSea.org on Polygon Network

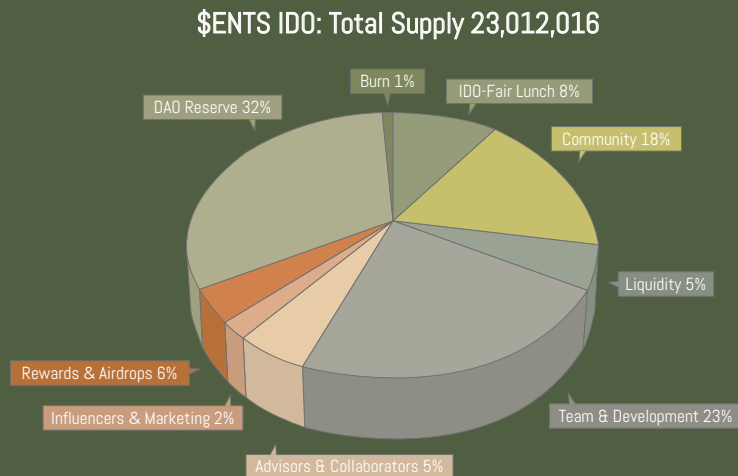

First 15 Elder ENTS Whitelisted Minting
at discount price TBA date

NFTunks 1st Collection: CryptoKeules:
by Diegong - Local pixel Art Collaboration - TBA

IDO \$ENTS: To Be Announced

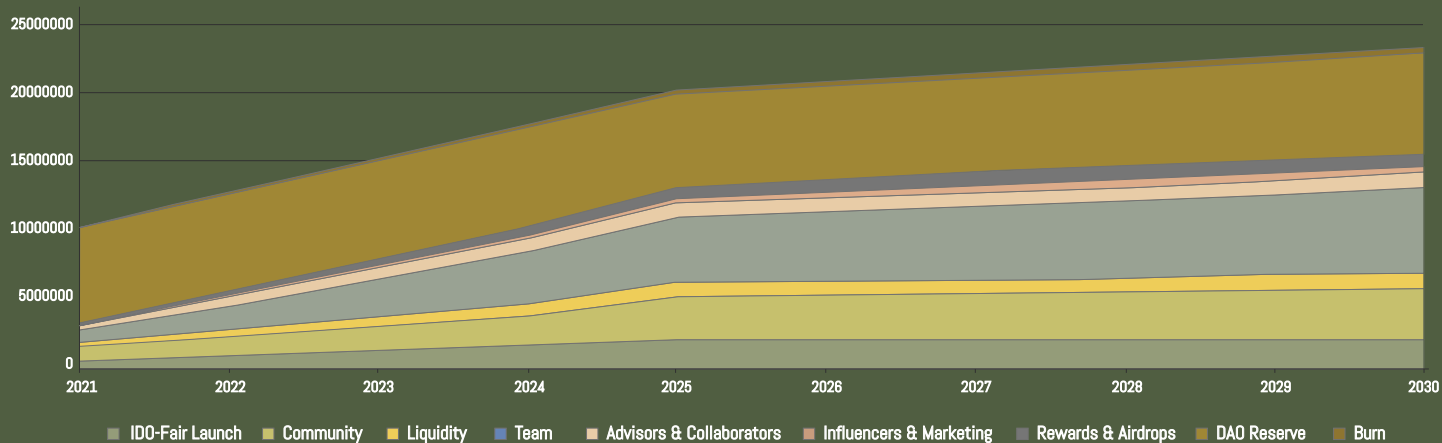

> Rewards-Sharing ERC-20 Fungible Token on Polygon Network
